go with bamboo...  
live with sustainability

# SUSTAINABILITY

Bamboo is a renewable resource harvested from sustainable and rapidly growing forests. Each culm used is individually selected and hand harvested. No heavy equipment is brought into the forests to damage the integrity of the forest floors. Unlike trees which get harvested, the rhizome roots of bamboo live to produce more shoots. Because the bamboo doesn't die, it does not release its CO2 carbon sink the way a tree does after it is cut down.

- **FAST GROWING**  
Grows to harvestable maturity in 5 years or less.
- **RAPIDLY RENEWABLE**  
Replenishes itself faster than other wood materials.
- **SELF PROPAGATING**  
No need to replant, roots left intact to grow next season.
- **CARBON SEQUESTRATION**  
Bamboo among the most efficient CO2 absorbers.
- **RELEASES OXYGEN**  
Bamboo produces about 35% more oxygen than trees.
- **LOCAL FARMERS**  
Locally owned and managed within close proximity.
- **NATURALLY FARMED**  
Without the use of pesticides, fertilizers, or irrigation.
- **HAND HARVESTED**  
No heavy equipment is used, leaving forest floor intact.
- **ZERO WASTE**  
Entire bamboo culm is used, wasting nothing.
- **ENVIRONMENTALLY SAFE**  
Low VOC, natural finish using only heat, steam & pressure.
- **SUSTAINABLE ALTERNATIVE**  
To many endangered hardwoods around the globe.

## OUTDOOR CARE AND MAINTENANCE

---

Congratulations on the purchase of your fine bamboo outdoor furniture. Simply following the steps listed below will ensure that your outdoor furniture will be protected and look beautiful for years to come.

Maintenance of your outdoor furniture should take no more than approximately 15-30 minutes for a complete setting of table and 4 chairs.

### PREVENTION:

All bamboo will naturally weather if left unattended outdoors and over time will develop a gray patina like that of teak. Applying a coat of quality outdoor furniture oil\* will ensure the rich, vibrant color of your furniture will stay true. We recommend oiling furniture up to 2 times per year depending on exposure to the sun.

### NATURAL REACTIONS:

Bamboo, like natural hardwoods, will contract and expand during changes in the weather due to temperature, rain and/or sun exposure. This natural movement within the bamboo may require you to occasionally retighten any bolts or hardware on your furniture.

### SAFETY:

Do not sit on the tabletops as this may cause undue stress on the joints of the bamboo timber or the hardware. Remember when moving tables to lift them and do not drag them. Avoid tilting chairs back and sitting on the rear legs only, as this can cause breakage and personal injury. Do not stand on the chairs or sit on the arms of the chair.

\* Greenington recommends using our factory OEM WOCA® Exterior Oil with added teak stain for all outdoor bamboo furniture. WOCA oils may be found by searching WOCA on the internet.

## GREENINGTON BAMBOO OUTDOOR FURNITURE

---

Greenington brings ideas to life through design development, engineering, and fabrication.
